

PRODUCT SPECIFICATION SHEET

XL NEATCUT 'J' NEAT CUTTING OIL

Neatcut 'J' has a fortified chlorine/sulphur content that is stable, effective and provides needed anti-welding and extreme pressure characteristics. Other additives are compounded into the base to give excellent machining characteristics at all cutting speeds and under heavy-duty conditions.

It is an excellent choice for difficult honing operations on ferrous metals for such operations as gear cutting and broaching as well as turning, tapping and threading.

Being high in additive it is particularly suitable arduous stamping & piercing operations on difficult alloy metals such as phosphor bronze & nickel.
